Geographic Variation in Hospital Inpatient List Prices in the United States, 2013

Zeynal Karaca, Ph.D., and Brian Moore, Ph.D.

Introduction

In the United States, each hospital has a chargemaster that contains the hospital’s own list prices for all billable procedures and services performed at the hospital. Chargemasters use codes from the American Medical Association’s Current Procedure Terminology system and the International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) procedure system. Hospital list prices, reported as charges in the Healthcare Cost and Utilization Project (HCUP) databases, reflect the amount the hospital billed for the entire hospital stay, usually excluding professional (physician) fees, and vary across hospitals and markets.

Hospitals periodically update the list prices in their chargemasters to account for new procedure codes and changes in their operating costs, expected payer mix, expected service mix, and volumes. As a result, there might be substantial variation in charges for many individual items within the chargemaster over time and across hospitals and markets.

Major public and private insurance providers negotiate a discount from the list prices with hospitals. Actual payments to hospitals by public and private payers are generally much lower than their reported list prices and are typically adjusted by an area wage index (AWI) to account for geographic variation across regions in labor costs, which represent a component of pricing that is to some degree beyond the hospital’s control. Hospitals across different regions might experience sizable differences in reimbursement because of these AWI adjustments.

2 For more details, see Charges in the Definitions section or the NIS Description of Data Elements entry for TOTCHG at http://hcup-us.ahrq.gov/db/vars/totchg/nisnote.jsp. Accessed August 3, 2016.
This HCUP Statistical Brief presents variation in charges for inpatient stays in the United States in 2013. The variation in charges adjusted by an AWI\(^6\) also is presented to provide potential insight into the extent to which AWI adjustment accounts for geographic variation in hospitals’ list prices. Mean charges per inpatient stay (with and without AWI adjustment) are calculated for each of the nine U.S. census divisions for all payers, Medicare, Medicaid, and private insurance. For each payer group, mean charges in each census division then are divided by mean charges nationally, and ratios are presented in maps to estimate the direction and magnitude of the difference in mean charges between each division and the nation as a whole. Ratios with values greater than 1.0 indicate divisions with mean charges that are greater than the national mean; values less than 1.0 indicate divisions with mean charges that are less than the national mean. All differences between estimates noted in the text are statistically significant at the 0.05 level or better.

Findings

*Mean inpatient charges for all payers, by census division, 2013*

Figure 1 displays the ratios of U.S. census division-level mean charges relative to the national mean values per inpatient stay for all payers. In the top map charges are unadjusted, and in the bottom map charges are adjusted by the AWI.

---

Figure 1. Ratio of mean inpatient charges per stay relative to the national mean by census division, unadjusted and adjusted by area wage index, 2013

Inpatient Charges Per Stay, All Stays
National Mean: $39,500

Area Wage Index-Adjusted Inpatient Charges Per Stay, All Stays
National Mean: $39,000

*Statistically significant difference from 1.00 at the 0.05 level or better
Note: Divisions are color-coded to represent 5 percentage point bins above or below the national mean value.
Source: Agency for Healthcare Research and Quality (AHRQ), Center for Delivery, Organization, and Markets, Healthcare Cost and Utilization Project (HCUP), National Inpatient Sample (NIS), 2013
There was substantial variation in mean inpatient charges per stay across census divisions in 2013.

In 2013, three census divisions had mean inpatient charges per stay that were higher than the national mean of $39,500 per stay: Pacific (37 percent higher), Middle Atlantic (16 percent higher), and Mountain (10 percent higher). Five divisions had mean inpatient charges per stay that were lower than the national mean: New England (27 percent lower), West North Central (23 percent lower), East South Central (17 percent lower), East North Central (16 percent lower), and South Atlantic (8 percent lower). Mean inpatient charges per stay in the West South Central division did not differ significantly from the national mean.

The variation in AWI-adjusted mean inpatient charges per stay across census divisions in 2013 remained but was lower than unadjusted charges.

In 2013, three census divisions had AWI-adjusted mean inpatient charges per stay that were higher than the AWI-adjusted national mean of $39,000 per stay: West South Central (12 percent higher), Mountain (9 percent higher), and Pacific (7 percent higher). Three divisions had AWI-adjusted mean inpatient charges per stay that were lower than the AWI-adjusted national mean: New England (40 percent lower), West North Central (18 percent lower), and East North Central (11 percent lower). AWI-adjusted mean inpatient charges per stay in the East South Central, South Atlantic, and Middle Atlantic divisions did not differ significantly from the AWI-adjusted national mean.

Mean inpatient charges for Medicare stays, by census division, 2013

Figure 2 displays the ratios of U.S. census division-level mean charges relative to the national mean values per hospital inpatient stay for Medicare stays, unadjusted and then adjusted by the AWI.
Figure 2. Ratio of mean inpatient charges per Medicare stay relative to the national Medicare mean by census division, unadjusted and adjusted by area wage index, 2013

Inpatient Charges Per Stay, Medicare
National Mean: $47,200

Area Wage Index-Adjusted Inpatient Charges Per Stay, Medicare
National Mean: $47,100

*Statistically significant difference from 1.00 at the 0.05 level or better

Note: Divisions are color-coded to represent 5 percentage point bins above or below the national mean value.

Source: Agency for Healthcare Research and Quality (AHRQ), Center for Delivery, Organization, and Markets, Healthcare Cost and Utilization Project (HCUP), National Inpatient Sample (NIS), 2013
There was substantial variation in mean inpatient charges per Medicare stay across census divisions in 2013.

In 2013, the mean hospital inpatient charges per Medicare stay in three U.S. census divisions were higher than the national Medicare mean of $47,200 per stay: Pacific (48 percent higher), Mountain (17 percent higher), and Middle Atlantic (16 percent higher). Five divisions had mean hospital inpatient charges per stay that were lower than the national mean: New England (33 percent lower), West North Central (24 percent lower), East South Central (21 percent lower), East North Central (18 percent lower), and South Atlantic (6 percent lower). Mean hospital inpatient charges per Medicare stay in the West South Central division did not differ significantly from the national Medicare mean.

The variation in AWI-adjusted mean inpatient charges per Medicare stay across census divisions in 2013 remained but was lower than unadjusted charges.

In 2013, three census divisions had AWI-adjusted mean hospital inpatient charges per Medicare stay that were higher than the AWI-adjusted national Medicare mean of $47,100 per stay: West South Central (16 percent higher), Mountain (15 percent higher), and Pacific (14 percent higher). Four divisions had AWI-adjusted mean hospital inpatient charges per Medicare stay that were lower than the AWI-adjusted national Medicare mean: New England (45 percent lower), West North Central (19 percent lower), East North Central (13 percent lower), and East South Central (5 percent lower). AWI-adjusted mean hospital inpatient charges per Medicare stay in the South Atlantic and Middle Atlantic divisions did not differ significantly from the AWI-adjusted national Medicare mean.

Mean inpatient charges for Medicaid stays, by census division, 2013

Figure 3 displays the ratios of U.S. census division-level mean charges relative to the national mean values per hospital inpatient stay for Medicaid stays, unadjusted and then adjusted by the AWI.
Figure 3. Ratio of mean inpatient charges per Medicaid stay relative to the national Medicaid mean, by census division, unadjusted and adjusted by area wage index, 2013

*Statistically significant difference from 1.00 at the 0.05 level or better

Note: Divisions are color-coded to represent 5 percentage point bins above or below the national mean value.

Source: Agency for Healthcare Research and Quality (AHRQ), Center for Delivery, Organization, and Markets, Healthcare Cost and Utilization Project (HCUP), National Inpatient Sample (NIS), 2013
There was substantial variation in mean inpatient charges per Medicaid stay across census divisions in 2013.

In 2013, two census divisions had mean inpatient charges per Medicaid stay that were higher than the national Medicaid mean of $30,900 per stay: Pacific (39 percent higher) and Middle Atlantic (17 percent higher). Six divisions had mean inpatient charges per Medicaid stay that were lower than the national Medicaid mean: New England (22 percent lower), West North Central (19 percent lower), East South Central (19 percent lower), East North Central (15 percent lower), South Atlantic (12 percent lower), and West South Central (11 percent lower). Mean inpatient charges per Medicaid stay in the Mountain division did not differ significantly from the national Medicaid mean.

The variation in AWI-adjusted mean inpatient charges per Medicaid stay across census divisions in 2013 remained but was lower than unadjusted charges.

In 2013, the AWI-adjusted mean inpatient charges per Medicaid stay in the Pacific division were 11 percent higher than the AWI-adjusted national Medicaid mean of $30,000 per stay. Three divisions had AWI-adjusted mean inpatient charges per Medicaid stay that were lower than the AWI-adjusted national Medicaid mean: New England (35 percent lower), West North Central (13 percent lower), and East North Central (8 percent lower). AWI-adjusted mean inpatient charges per Medicaid stay in the South Atlantic, Middle Atlantic, East South Central, West South Central, and Mountain divisions did not differ significantly from the AWI-adjusted national Medicaid mean.

Mean inpatient charges for privately insured stays, by census division, 2013

Figure 4 displays the ratios of U.S. census division-level mean charges relative to the national mean values per hospital inpatient stay for privately insured stays, unadjusted and then adjusted by the AWI.
Figure 4. Ratio of mean inpatient charges per privately insured stay relative to the national privately insured mean, by census division, unadjusted and adjusted by area wage index, 2013

Inpatient Charges Per Stay, Private Insurance
National Mean: $35,900

Area Wage Index-Adjusted Inpatient Charges Per Stay, Private Insurance
National Mean: $35,200

*Statistically significant difference from 1.00 at the 0.05 level or better

Note: Divisions are color-coded to represent 5 percentage point bins above or below the national mean value.

Source: Agency for Healthcare Research and Quality (AHRQ), Center for Delivery, Organization, and Markets, Healthcare Cost and Utilization Project (HCUP), National Inpatient Sample (NIS), 2013
There was substantial variation in mean inpatient charges per privately insured stay across census divisions in 2013.

In 2013, two census divisions had mean inpatient charges per privately insured stay that were higher than the national privately insured mean of $35,900 per stay: Pacific (29 percent higher) and Middle Atlantic (16 percent higher). Five divisions had mean inpatient charges per privately insured stay that were lower than the national privately insured mean: West North Central (23 percent lower), New England (22 percent lower), East South Central (15 percent lower), East North Central (13 percent lower), and South Atlantic (8 percent lower). Mean inpatient charges per privately insured stay in the Mountain and West South Central divisions did not differ significantly from the national privately insured mean.

The variation in AWI-adjusted mean inpatient charges per privately insured stay across census divisions in 2013 remained but was lower than unadjusted charges.

In 2013, the AWI-adjusted mean inpatient charges per privately insured stay in the West South Central division were 16 percent higher than the AWI-adjusted national privately insured mean of $35,200 per stay. Three divisions had AWI-adjusted mean inpatient charges per privately insured stay that were lower than the AWI-adjusted national privately insured mean: New England (36 percent lower), West North Central (18 percent lower), and East North Central (8 percent lower). AWI-adjusted mean inpatient charges per privately insured stay in the South Atlantic, East South Central, Middle Atlantic, Mountain, and Pacific divisions did not differ significantly from the AWI-adjusted national privately insured mean.
Data Source

The estimates in this Statistical Brief are based upon data from the Healthcare Cost and Utilization Project (HCUP) 2013 National Inpatient Sample (NIS). All differences between estimates noted in the text are statistically significant at the 0.05 level or better.

Definitions

Types of hospitals included in the HCUP National Inpatient Sample
The National Inpatient Sample (NIS) is based on data from community hospitals, which are defined as short-term, non-Federal, general, and other hospitals, excluding hospital units of other institutions (e.g., prisons). The NIS includes obstetrics and gynecology, otolaryngology, orthopedic, cancer, pediatric, public, and academic medical hospitals. Excluded are long-term care facilities such as rehabilitation, psychiatric, and alcoholism and chemical dependency hospitals. Beginning in 2012, long-term acute care hospitals are also excluded. However, if a patient received long-term care, rehabilitation, or treatment for a psychiatric or chemical dependency condition in a community hospital, the discharge record for that stay will be included in the NIS.

Unit of analysis
The unit of analysis is the hospital discharge (i.e., the hospital stay), not a person or patient. This means that a person who is admitted to the hospital multiple times in 1 year will be counted each time as a separate discharge from the hospital.

Charges
Charges represent the amount a hospital billed for the case. Hospital charges reflect the amount the hospital billed for the entire hospital stay and do not include professional (physician) fees. For the purposes of this Statistical Brief, charges are reported to the nearest hundred.

Area wage index
The area wage index is an index computed by the Centers for Medicare & Medicaid Services (CMS) to measure the relative hospital wage level in a geographic area compared with the national average hospital wage level. It is provided on the HCUP Cost-to-Charge (CCR) file to allow researchers to analyze cost differences geographically or to control for price factors beyond the hospital’s control.7

Payer
Payer is the expected payer for the hospital stay. To make coding uniform across all HCUP data sources, payer combines detailed categories into general groups:

- Medicare: includes patients covered by fee-for-service and managed care Medicare
- Medicaid: includes patients covered by fee-for-service and managed care Medicaid
- Private Insurance: includes Blue Cross, commercial carriers, and private health maintenance organizations (HMOs) and preferred provider organizations (PPOs)
- Uninsured: includes an insurance status of self-pay and no charge
- Other: includes Workers’ Compensation, TRICARE/CHAMPUS, CHAMPVA, Title V, and other government programs.

Hospital stays billed to the State Children’s Health Insurance Program (SCHIP) may be classified as Medicaid, Private Insurance, or Other, depending on the structure of the State program. Because most State data do not identify patients in SCHIP specifically, it is not possible to present this information separately.

For this Statistical Brief, when more than one payer is listed for a hospital discharge, the first-listed payer is used.

Division
Division corresponds to the location of the hospital and is one of the nine divisions defined by the U.S. Census Bureau:

- New England: Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut
- Middle Atlantic: New York, New Jersey, Pennsylvania
- East North Central: Ohio, Indiana, Illinois, Michigan, Wisconsin
- West North Central: Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, Kansas
- South Atlantic: Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida
- East South Central: Kentucky, Tennessee, Alabama, Mississippi
- West South Central: Arkansas, Louisiana, Oklahoma, Texas
- Mountain: Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada
- Pacific: Washington, Oregon, California, Alaska, Hawaii

About HCUP

The Healthcare Cost and Utilization Project (HCUP, pronounced "H-Cup") is a family of health care databases and related software tools and products developed through a Federal-State-Industry partnership and sponsored by the Agency for Healthcare Research and Quality (AHRQ). HCUP databases bring together the data collection efforts of State data organizations, hospital associations, and private data organizations (HCUP Partners) and the Federal government to create a national information resource of encounter-level health care data. HCUP includes the largest collection of longitudinal hospital care data in the United States, with all-payer, encounter-level information beginning in 1988. These databases enable research on a broad range of health policy issues, including cost and quality of health services, medical practice patterns, access to health care programs, and outcomes of treatments at the national, State, and local market levels.

HCUP would not be possible without the contributions of the following data collection Partners from across the United States:

- **Alaska** State Hospital and Nursing Home Association
- **Arizona** Department of Health Services
- **Arkansas** Department of Health
- **California** Office of Statewide Health Planning and Development
- **Colorado** Hospital Association
- **Connecticut** Hospital Association
- **District of Columbia** Hospital Association
- **Florida** Agency for Health Care Administration
- **Georgia** Hospital Association
- **Hawaii** Health Information Corporation
- **Illinois** Department of Public Health
- **Indiana** Hospital Association
- **Iowa** Hospital Association
- **Kansas** Hospital Association
- **Kentucky** Cabinet for Health and Family Services
- **Louisiana** Department of Health and Hospitals
- **Maine** Health Data Organization
- **Maryland** Health Services Cost Review Commission
- **Massachusetts** Center for Health Information and Analysis
- **Michigan** Health & Hospital Association
- **Minnesota** Hospital Association
- **Mississippi** Department of Health
- **Missouri** Hospital Industry Data Institute
- **Montana** MHA - An Association of Montana Health Care Providers
- **Nebraska** Hospital Association
- **Nevada** Department of Health and Human Services
New Hampshire  Department of Health & Human Services  
New Jersey  Department of Health  
New Mexico  Department of Health  
New York  State Department of Health  
North Carolina  Department of Health and Human Services  
North Dakota  (data provided by the Minnesota Hospital Association)  
Ohio  Hospital Association  
Oklahoma  State Department of Health  
Oregon  Association of Hospitals and Health Systems  
Oregon  Office of Health Analytics  
Pennsylvania  Health Care Cost Containment Council  
Rhode Island  Department of Health  
South Carolina  Revenue and Fiscal Affairs Office  
South Dakota  Association of Healthcare Organizations  
Tennessee  Hospital Association  
Texas  Department of State Health Services  
Utah  Department of Health  
Vermont  Association of Hospitals and Health Systems  
Virginia  Health Information  
Washington  State Department of Health  
West Virginia  Health Care Authority  
Wisconsin  Department of Health Services  
Wyoming  Hospital Association  

About Statistical Briefs  

HCUP Statistical Briefs are descriptive summary reports presenting statistics on hospital inpatient and emergency department use and costs, quality of care, access to care, medical conditions, procedures, patient populations, and other topics. The reports use HCUP administrative health care data.  

About the NIS  

The HCUP National Inpatient Sample (NIS) is a national database of hospital inpatient stays. The NIS is nationally representative of all community hospitals (i.e., short-term, non-Federal, nonrehabilitation hospitals). The NIS includes all payers. It is drawn from a sampling frame that contains hospitals comprising more than 95 percent of all discharges in the United States. The vast size of the NIS allows the study of topics at the national and regional levels for specific subgroups of patients. In addition, NIS data are standardized across years to facilitate ease of use. Over time, the sampling frame for the NIS has changed; thus, the number of States contributing to the NIS varies from year to year. The NIS is intended for national estimates only; no State-level estimates can be produced.  

The 2012 NIS was redesigned to optimize national estimates. The redesign incorporates two critical changes:  

- Revisions to the sample design—starting with 2012, the NIS is now a sample of discharge records from all HCUP-participating hospitals, rather than a sample of hospitals from which all discharges were retained (as is the case for NIS years before 2012).  
- Revisions to how hospitals are defined—the NIS now uses the definition of hospitals and discharges supplied by the statewide data organizations that contribute to HCUP, rather than the definitions used by the American Hospital Association (AHA) Annual Survey of Hospitals.  

The new sampling strategy is expected to result in more precise estimates than those that resulted from the previous NIS design by reducing sampling error: for many estimates, confidence intervals under the new design are about half the length of confidence intervals under the previous design. The change in sample design for 2012 necessitates recomputation of prior years’ NIS data to enable analyses of trends that use the same definitions of discharges and hospitals.
For More Information
